

Bleeding Control Leg Trainer

PACKABLE WOUND TRAINER

Simulab's **Bleeding Control Leg Trainer** is a simple, cost-effective, easy to use packable wound trainer that offers simulated hemostatic wounds. The trainer presents a durable outer skin layer for repetitively executing critical patient treatment such as wound packing, compression and tourniquet application with any off the shelf device. Can be used anywhere, anytime for a variety of wound packing events.

PRODUCT HIGHLIGHTS

- » Realistic and durable leg anatomy and skin
- » Two different wound beds available: a laceration or stab wound and a large caliber gunshot wound (GSW) with both entrance and exit points
- » The GSW contains a bony landmark that allows instruction to "pack to the bone"
- » Realistic and durable skin for multiple student uses

SKILLS

- » Wound packing
- » Use of hemostatic gauzes
- » Compression
- » Tourniquet application
